What's new since the 14 Oct pack

Minindu Abeywardena · 15 Oct 2026 · For the supervisor meeting on Friday 16 Oct

Read this after `00_READ_ME_FIRST.pdf`. Everything in the 14 Oct pack is unchanged; this page lists what was added or corrected.

Added

File	Where	What it is	What to say to Madam
`Walkthrough_tasks_T1-T5_draft_15Oct.pdf`	`4_Team_and_planning/`	The five walkthrough tasks written out: start state, success state, screens, and the shortest correct path with its step count, one path per profile where the profile changes it	"Evaluators compare each persona's path against these counts. They are a draft; we confirm them against Imansha's wireframes on 22 Oct and freeze them on 29 Oct."
`tasks.md`	`3_Code_data_model/docs/walkthrough/`	The same content as the file that goes in the repo	Only if she asks where it lives

Step counts: T1a 9 · T1b 3 · T2 4 · T3 3 per profile · T4 "Why?" 4, "How sure?" 3 · T5 4.

Found while writing the walkthrough tasks

These are worth raising, because two of them touch the framework:

1. **The action is missing from two profiles in the worked example.** In Research Approach v3.2 (pp. 16–17), "Show me why" and "How sure, and what changed?" have no "Get your go-bag ready today" line. `checkInvariants()` requires the action in every profile, so the walkthrough paths include it. The worked example needs the line added.
2. **T5 cannot be walked by two of the three profiles as designed.** In `profile.ts`, change alerts are off for "Just tell me what to do" and "Show me why", so the change notice (S10) never appears for them. Options: walk T5 only with the "How sure" persona, or show a short "Changed since yesterday" line on the forecast card in every profile. Recommended: the second, because both days are "Possible" and the word alone hides the rise from 1 in 10 to 3 in 10.
3. **Two counts depend on the wireframes:** T1a is 9 if choosing an answer moves on, 16 if each question needs a "Next" tap; T3 for "Just tell me what to do" is 4 if the audio needs a tap to play.

Corrected

- **Guideline coverage totals:** the final figures are 13 covered, 20 partly, 9 UI only, 8 not covered (14 Oct). Some older pages in the pack show the 13 Oct first figures (10 / 21 / 9 / 10); use the final ones.
- **Meeting date:** files that say "15 Oct" mean Friday 16 Oct.
- **Work log PDF:** it was exported before 14 Oct. Since then: the meeting pack is done, walkthrough tasks are in progress (draft 15 Oct), and `checkInvariants()` and the profile store are merged (PR #14).

Still not in the pack

Output	Why	When
Imansha's second rating of the 24-cell XAI table and the agreement count with Supun (N of 24)	Not received yet	Asked for 15 Oct; bring if it arrives
Supun's XAI results, `forecasts.json`, prediction screens	Supun's work, not shared yet	Ask Supun to bring them
Wireframes	Imansha's task	Due 22 Oct
Related-work section of the paper	Not drafted yet; the three draft paragraphs are in `related-work-notes.md` (folder 2)	After Q1 is answered (it decides the gap sentence)
User study results	There is no user study; the evaluation is an expert walkthrough from 30 Oct	Never claimed

Questions for Friday (unchanged, plus one)

Q1 lead with the invariants? · Q2 alert mode: all five facts, or hazard, place and action? · Q3 test AI wording on prepared rewordings? · keep or drop the old condition picker · second classifier for the 128 guidelines · online appendix host · **new:** change line on the forecast card for every profile (T5, item 2 above)?
